- Regarding claim 1, the text from "and" in line 16 to "plate," in line 19 has been deleted and replaced by the following:

- -a first corner and a second corner defined on opposite edges of the elongated linear bend;

a guide bar comprising an elongated first leg and a shorter second leg;

the first leg comprising a first end, a second end, and means for penetrating meat there between;

the second leg comprising a first end and a second end; and

wherein the first end of the first leg is directly connected to the first corner, the first end of the second leg is directly connected to the second corner, and second ends of both legs are directly connected to one another at an acute angle;- -

- Regarding claim 4, the number "3" on line 2 has been deleted and replaced by the number - -1- -.
- Regarding claim 10, the number "9" on line 2 has been deleted and replaced by the number - -1- -, and the phrase - -for penetrating meat- - after "said means" in line 3 has been added.
- Regarding claim 12,

#### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance: The claims are allowable because the prior art fails to teach a guide bar comprising an elongated first leg with means to penetrate meat and shorter second leg as set forth in claims 1 and 12.

Hall (3,319,682) discloses a cutting template capable of being used for cutting a plurality of meat pieces from a meat section all of which are precisely similar in size and weight, said cutting template comprising: a graspable handle composed of a planar forefinger abutting section (top of 21) and a planar thumb rest section (side of 21) which are separated by a crease, said forefinger abutting section being deflected at said crease at an angle to said thumb rest section; a flat guide plate (14) integrally attached to said thumb reset section at an elongated linear bend; a first corner and a second corner defined on opposite sides of the bend; a guide bar (15); whereby said guide plate is capable of being placed against an edge of the meat section with said guide bar

resting on an upper surface of the meat section with the operator to then move a cutting instrument around an exterior edge of said guide bar to cause severing of a first said meat piece with the procedure to then be repeated to obtain said meat pieces. Hall fails to disclose the guide bar as claimed, including an elongated first leg comprising means to penetrate meat and shorter second leg as set forth in claims 1 and 12.

The above prior art by itself or in combination with the other prior art cited fails to teach the claimed invention set forth in claims 1 and 12.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
